

An Incredible Adventure

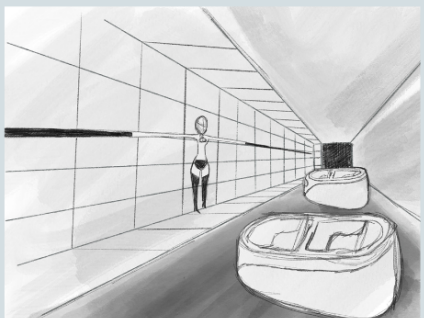

I have designed a concept for a new ride at Walt Disney World. It is a trackless attraction called An Incredible Adventure that takes riders on a journey through Metroville with the Incredible family (from the Disney movie The Incredibles). I have researched the principles of Disney Imagineering, different ride mechanisms, ride technology, the process of designing theme park attractions, etc. and incorporated that into what I learned studying architecture and interior design at Salem. My ride concept focuses on the interaction between the ride and it's riders and the overall experience of the ride.

The Space

Disney's Hollywood Studios 73,194 ft²
